

1.0 m

0.6 m³

Dry agent hopper with a volume of 0.6 m³.

Intended for hitching to smaller vehicles and tractors.

Spreading material is supplied by a roller with thrust plates.

MINI

SIMPLE MAINTENANCE OF NARROW ROADS

The towed MINI spreader is intended for spreading on narrow roads, such as pedestrian areas by the side of roads or in parks. It is easily hitched to small vehicles or tractors equipped by a towing hitch.

MINI is powered by a mechanism on the spreader's wheels. The spreading material is taken from the hopper using a roller with thrust plates, while the control of quantity of the used spreading material is performed by a mechanical lever for dosing. The spreader's hopper is protected by a grid that prevents the entrance of large clumps of material. A cover tarpaulin protects the spreading material from precipitation and keeps it dry. Filled spreader tyres enable operation even on the most demanding terrains and guarantee the device's durability. MINI's visibility in traffic is ensured by lights mounted on the rear side, powered through a standard connector on the vehicle.

Simplicity of use is the basic characteristic of the MINI spreader, which makes it an ideal choice for easy but efficient winter maintenance of small and narrow traffic surfaces.

MINI

Minimal mass* (kg)	190
Spreader capacity of solid agent (m ³)	0.6
Spreading width (m)	1

* Mass of fully configured device depends on chosen options.
